PROFESSIONAL SUMMARY

Full Stack Laravel Developer with 2+ years of experience building scalable SaaS platforms, CRM systems, REST APIs and role-based business applications. Experienced in multi-tenant database architecture, background processing, secure cloud storage and third-party integrations using Laravel, PHP, MySQL, Vue.js and React. Focused on clean architecture, maintainable code and reliable production systems.

PROFESSIONAL EXPERIENCE

Backend / Full Stack Developer | [ITLinked](#) 2024 - Present

- Build and maintain production Laravel applications, including RazorMail CRM and the LetSky Tourism visa operations platform.
- Design REST APIs, database workflows and third-party integrations using Laravel, PHP, MySQL, Vue.js, Twilio and DigitalOcean.
- Improve application reliability through queue-based processing, database optimization and clean, maintainable architecture.

Laravel Developer Intern | [ITLinked](#) Nov 2023 - Dec 2023

- Assisted with Laravel modules, controllers, models, Blade views, MySQL queries and REST API development.
- Supported bug fixing, application testing and Git-based team collaboration while learning production development practices.

SELECTED PROJECTS

RazorMail CRM | Multi-Tenant SaaS Platform

- Converted the single-database open-source Krayin CRM into a multi-tenant SaaS platform with a dedicated subdomain and isolated database for each tenant.
- Designed tenant-resolution middleware that switches database connections dynamically between the Cloudways-hosted primary application and DigitalOcean tenant databases.
- Migrated the WhatsApp package from Meta to Twilio and designed WPForms APIs, field mapping and lead create/update synchronization.

razormail.com

LetSky Tourism | Visa Operations Platform

- Built a role-based platform for administrators, staff, agencies and clients to manage visa applications in one system.
- Moved 10-12 document uploads per application into database-backed Laravel jobs, preventing timeout-driven data loss and allowing processing to resume after worker restarts.
- Moved confidential files to private DigitalOcean Spaces and enforced ownership checks with temporary signed URLs for authorized access.
